Continuation of Substance of Interview including description of the general nature of what was agreed to if an agreement was reached, or any other comments: Attorney requested more explanation of 112, 1st rejections under written description and enablement. Explained that I am asking examiners to directly address the factors in both cases, from the written description guidelines and from In re Wands respectively. Explained to the attorney how the examiner was trying to address these factors. We discussed the nutshell questions, "Are they in possession of the genus of all ApoE stable folding intermediates?", and "Do they adequately teach how to make and use the genus of ApoE stable folding intermediates?" Applicants have provided evidence of producing a high percentage of a folding intermediate under specific conditions of urea and pH for two species, human full length ApoE4 and a 22 kD fragment of ApoE3 and ApoE4. This folding intermediate is said to be consistent with the three state model of Barrick et al. 1993 (mentioned in the specification, but not of record), and to have at least some characteristics consistent with the molten globule model of protein folding. We looked at Figures 1 and 2 in particular which show a shoulder in the ellipticity consistent with a folding intermediate. This is a limited showing considering the breadth of claims. ApoE is widespread among vertebrates, for example.
